A Mistake Always Returns

Perpetual Motion Machine?

Space moves at the speed of light in a circle, but moves faster in the waterfall.

(Wormhole?)

Space returns to the center of the universe
(The Big Bang, contracted, white hole?)

The Big Bang did not start space; it started entropy (time).

Space was spread in a circle, in a static way, until a particle on the perimeter of the circle, in a quantum process, fell into the waterfall, and thus a chain reaction was created.

(The Big Bang)
